

VOLUNTEERS NEEDED FOR RESEARCH STUDY

How do Undergraduate Nurse Educators Use Simulation to Evaluate Learners and Determine Learner Competency?

TCU IRB# 2024-167

- Do you design or perform any undergraduate nursing student evaluations? Do you currently use or plan to use any form of simulation in the evaluation process? If so, we would like your feedback!
- Nursing researchers from the INACSL Research SIG are conducting research to find out how nurse educators are using simulation to evaluate learners. We also want to understand how nurse educators use simulation to evaluate learner competency, and what barriers prevent or limit using simulation to evaluate learner competency.
- You will be asked to provide information about demographics and how you use simulation to evaluate learners, determine competency, and which barriers prevent or limit learner evaluations. This survey involves 10-25 minutes.
- Participation will take place online through Qualtrics. There are no risks involved in this research.
- If you complete all survey materials, we will provide you with a needs assessment for using simulation to evaluate learners.
